## Behavior Rating Inventory of Executive Function® (BRIEF®)

### Description

**Purpose:** Assess impairment of executive function  
**Ages:** 5 to 18 years  
**Time:** 10-15 minutes to administer; 15-20 minutes to score  
**Administration:** Individual

Utilizes parent and teacher input in the evaluation of the child's behavioral functioning. Useful in evaluating children with a wide spectrum of developmental and acquired neurological conditions such as learning disabilities, attention deficit/hyperactivity disorder, pervasive developmental disorders/autism and traumatic brain injury.

The BRIEF consists of 2 rating forms—a parent questionnaire and a teacher questionnaire—designed to assess executive functioning in the home and school environments. Each questionnaire contains 86 items. The BRIEF assesses 8 clinical scales that fall within 2 major areas (Indexes), Behavioral Regulation and Metacognition as described below:

#### **Behavioral Regulation- Clinical Scales:**

**Inhibit:** Control impulses; stop behavior

**Shift:** Move freely from one activity/situation to another; transition; problem-solve flexibly

**Emotional Control:** Modulate emotional responses appropriately

#### **Metacognition- Clinical Scales:**

**Initiate:** Begin activity; generate ideas

**Working Memory:** Hold information in mind for purpose of completing a task

**Plan/Organize:** Anticipate future events; set goals; develop steps; grasp main ideas

#### **Organization of Materials**

**Monitor:** Check work; assess own performance

Separate normative tables for both the parent and teacher forms provide T scores, percentiles, and 90% confidence intervals for four developmental age groups (5-18 years) by gender of the child.
